

Sikkens Colorbuild™ Plus

The first color undercoat sets new standards

Colorbuild Plus

Colorbuild was the first colored primer system in the market. Colorbuild Plus improves upon all of the features you've known with Colorbuild.

Colorbuild Plus achieves color without the use of topcoat toners – just mix the six colored primers for the desired primer color. Because of the close proximity between undercoat and topcoat color, Colorbuild Plus reduces the amount of topcoat material that is needed to accomplish hiding. Less topcoat material translates into decreased cost & shorter application time thereby increasing shop productivity without sacrificing quality.

Colorbuild Plus is a versatile system that can be used as a high build primer surfacer or a wet-on-wet primer sealer.
